

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Previously Presented) Apparatus for establishing communications between a calling station and one or more called stations based on information stored at a called station, at least one called station comprising:
 - a. a memory storing information in a database;
 - b. a receiver for receiving a communications request including a query specifying at least one criterion for searching said database;
 - c. a comparator for comparing information stored in said database with said at least one criterion, and
 - d. a transmitter for responding to said communications request only when said information stored in said database satisfies said at least one criterion.
2. (Original) The apparatus of claim 1, further comprising a global positioning satellite receiver for storing current location information in said database.
3. (Previously Presented) The apparatus of claim 2, in which said communications request includes at least one criterion based on location of said called station with respect to calling station.

4. (Original) The apparatus of claim 2, further comprising:
a proximity detector for providing relative location information about nearby objects
based on apparatus location, and a computing device for calculating location information
independent of said apparatus location using location information provided by said
proximity detector and information provided by said global positioning satellite receiver.

5. (Previously Presented) The apparatus of claim 1, further comprising: at
least one status detector for storing information about the status of said apparatus in said
database.

6. (Original) The apparatus of claim 5, in which said communication request
includes at least one criterion based on status.

7. (Original) The apparatus of claim 1, in which said database stores
information about history of said apparatus.

8. (Original) The apparatus of claim 7, in which said communications request
includes at least one criterion based on history.

9. (Original) The apparatus of claim 2 further comprising a touch-screen
display which displays current location information in a moving map display.

10. (Previously Presented) Apparatus for establishing communications between a calling station and one or more called stations based on information stored in a database at a called station, a calling station comprising:

- a. an input device for specifying a query for searching information stored in said database at one or more called stations; and
 - b. a transmitter for broadcasting a communications request including said query;
- and
- c. a receiver for receiving a response from one or more called stations having information in said database which satisfies said query.

11. CANCELLED

12. (Original) The apparatus of claim 10, further comprising:

a global positioning satellite receiver for storing current location information.

13. (Original) The apparatus of claim 12 further comprising a touch-screen display which displays current location information in a moving map display.

14. (Original) The apparatus of claim 10 further comprising:

a receiver for receiving a response from at least one station having a database containing information which satisfies said query, said response including information about the location of said at least one station,

a global positioning satellite receiver for storing location of said apparatus information,

a touch-screen display which displays location of said apparatus information in a moving map display and also information about the location of said at least one station.

15. (Original) The apparatus of claim 14, in which said touch screen display initiates a communications request when a location on said touch screen display displaying information about the location of said at least one station is touched.

16. (Previously Presented) Apparatus for establishing communications between a calling station and one or more called stations based on information stored at a called station, at least one of said one or more called stations comprising:

- a. a computer connected to a bus;
- b. a memory connected to said bus, storing information in a database;
- c. a receiver connected to said bus for receiving a communications request including a query specifying at least one criterion for searching said database; and
- d. a transmitter connected to said bus,

in which said computer is configured for comparing information stored in said database with said at least one criterion, and for responding to said communications request when said information stored in said database satisfies said at least one criterion.

17. (Original) The apparatus of claim 16 installed in a vehicle in which said computer controls vehicle functions and in which an authorized user may preempt control of said vehicle functions over said receiver when said transmitter responds to said communications request.

18. (Original) The apparatus of claim 16 installed in a vehicle having a hands free telephone in which said computer activates said hands free telephone under control of a request received over said receiver when said transmitter responds to said communications request.

19. - 21. CANCELLED

22. (Original) A system for communicating between an originating station and one or more called stations, comprising:

- a. a network for connecting stations;
- b. a plurality of stations, at least some of which include a database;
- c. a network channel for sending a communications request including a query specifying at least one criterion from said originating station to all stations and for receiving back a response from those stations at which said information stored in said database satisfies said at least one criterion, and
- d. a network communications channel for communications between said originating station and those stations at which said information stored in said database satisfies said at least one criterion.

23. (Original) The system of claim 22 in which said network is a cellular network.

24. - 26. CANCELLED.
